

Verify Appliance Malfunction

By Monitoring Temperature

Refrigeration Defrost Cycles

Compressor Run Time

The appliance repair and maintenance industry use ACR SmartButtons to monitor a variety of temperature related parameters that indicate levels of equipment performance and malfunction. Problems related to defrost cycle, compressor run-time, thermostat and timing mechanisms can all be monitored and pinpointed by using the low-cost ACR SmartButton data logger to monitor temperatures.

Another data-logging solution from ACR Systems.

Recommended Loggers - ACR SmartButton, OWL 100, OWL 200
