

Can I communicate with the PowerWatch remotely?

Yes, it is possible to communicate with PowerWatch remotely through modems and Ethernet adaptors. By connecting the serial Lite-Link cable (LIC-101) to a modem or Ethernet to Serial adaptor and leaving the Lite-Link cable inserted in the PowerWatch, you can access the logger from a computer via a phone line or the Local Area Network (LAN). You have complete control over the PowerWatch remotely in this way and can change settings, clear the logger or download collected data.
